Sensor dimensions
Scale 1:1

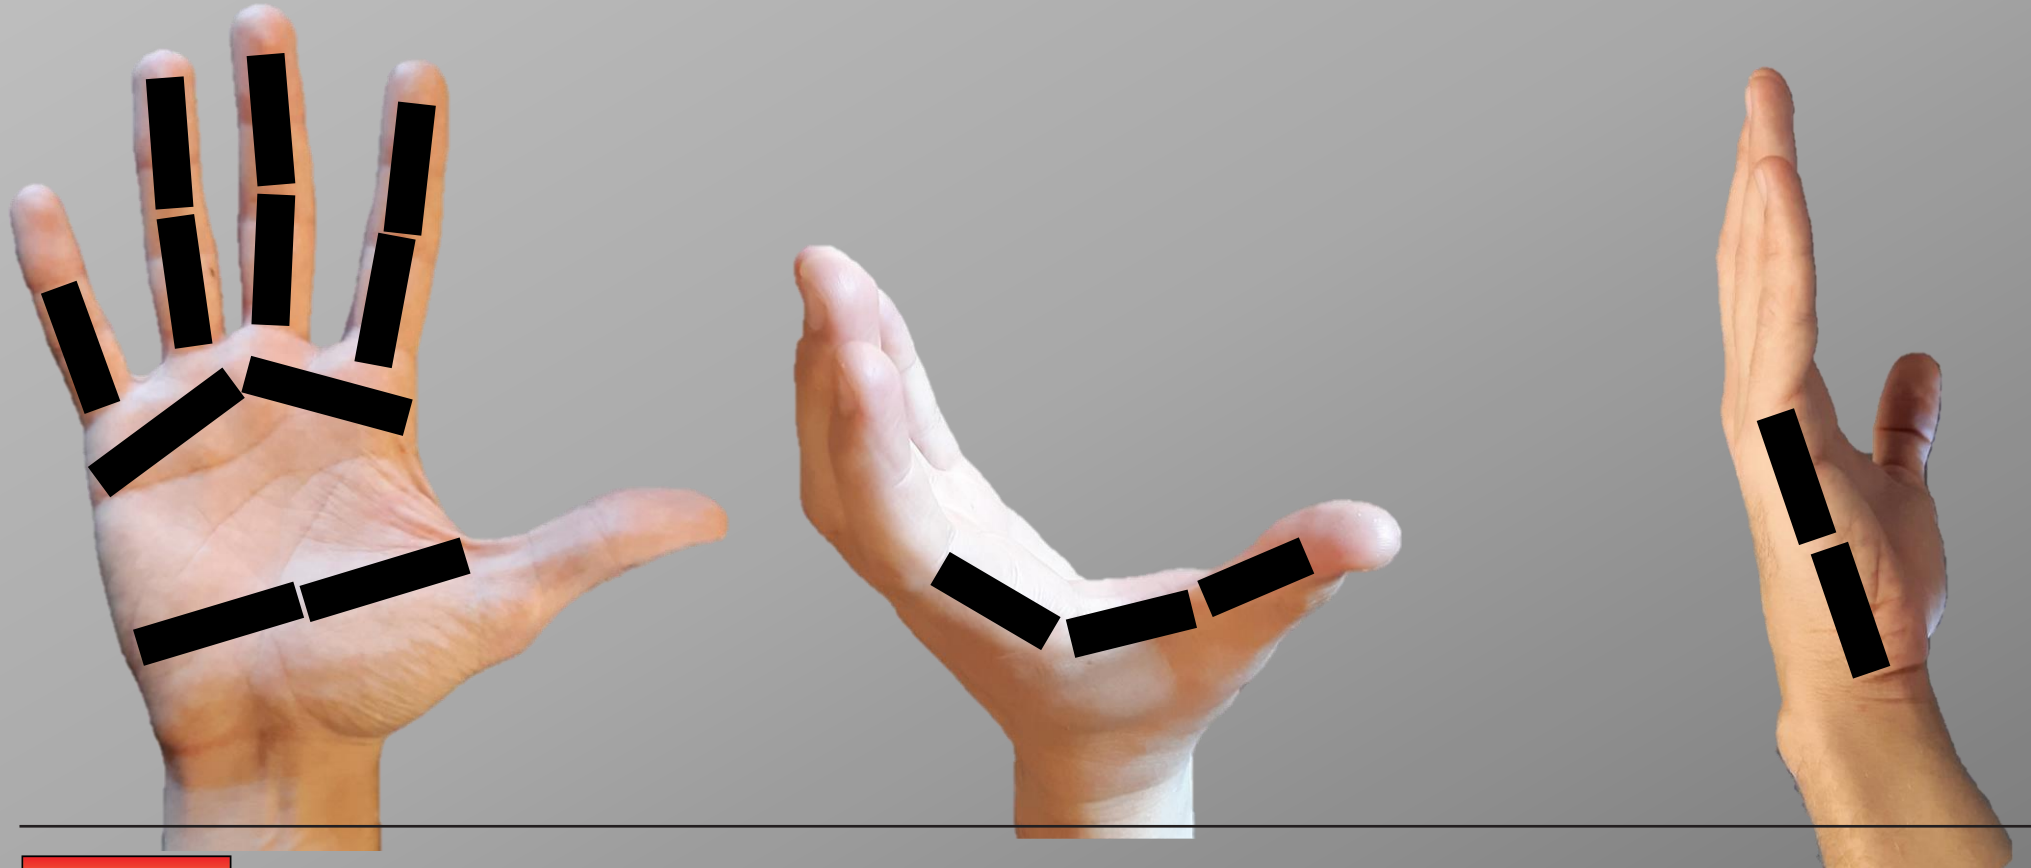

Checking some hands, we saw that the ideal sensor size will be:

- Length: 35 mm
- Height. 7/10mm (in line with your standards).

We are currently considering whether it is better to have M or L size gloves.

The hands and the sensors placed above are not scaled, only for representative explanation

Position of the sensors above the hands.

The hands and the sensors placed above are not scaled, only for representative explanation

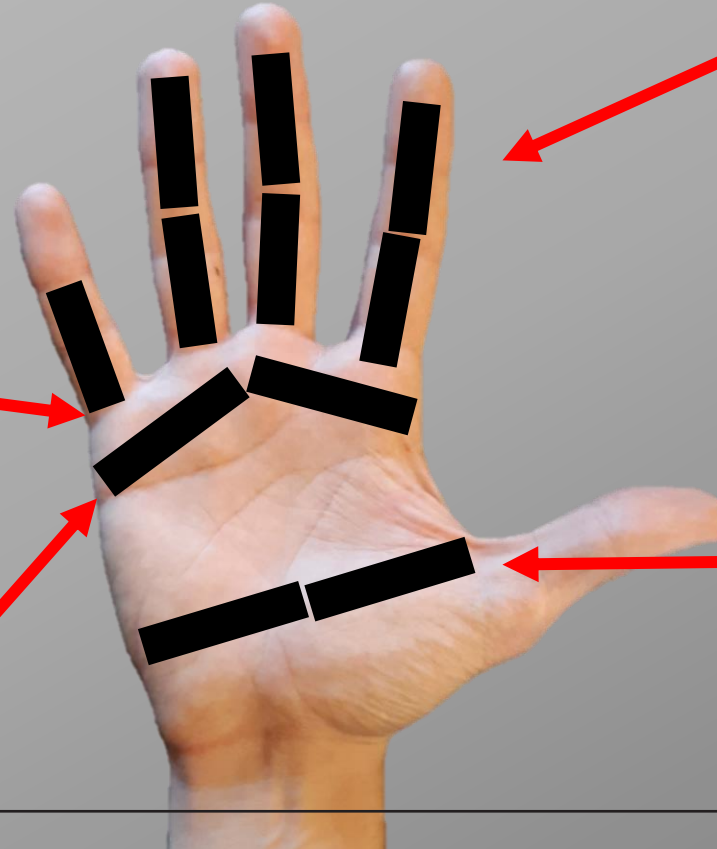

Position of sensors on the palm of the hand

The sensors over the fingers must start on the metacarpophalangeal fold

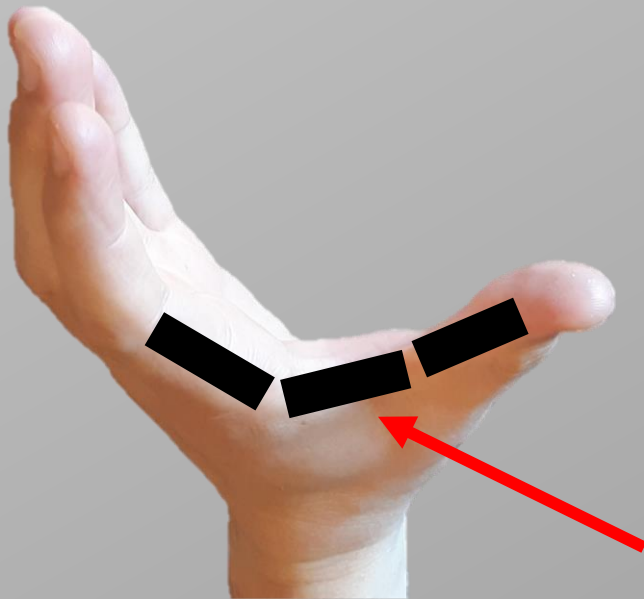

Place n.° 2 sensors in the upper part of the palm between the ends of the metacarpal bones and the phalanges

Place 2 sensors per finger except for the little finger in which place only one

Place n.° 2 sensors starting from the thumb joint to the opposite carpal bones.

Position of the sensors above the hands.

Place n.° 2/3 sensors as illustrated including the first phalanges of both thumb and index finger. The sensors will be placed into the external side of the thumb and runs over the groove between the two fingers.

The hands and the sensors placed above are not scaled, only for representative explanation

Position of the sensors above the hands.

Place n.º 2 sensors on the external side of the hands. Starting from the beginning of the carpal bones to the junction of the little finger.
